

Figure No. **YR-0.5CC-14** Sheet 14 of 19  
 Title: **Dawson City and Klondike Valley Flood Mapping Study  
 Composite Flood Hazard Map - Yukon River  
 0.5% Annual Exceedance Probability (AEP) with Factor of Safety  
 for Climate Change**

Client/Project:  
 Government of Yukon  
 Department of Environment  
 Water Resources Branch

Project: 123222713  
 Project Location: Dawson, Yukon  
 Prepared by MANDERSON on 2026-03-06  
 Requested by JMUIRHEAD on 2024-03-30  
 Review by JMUIRHEAD on 2026-03-06

- |                               |  |
|-------------------------------|--|
| River Flow Direction          | Surveyed Cross-Sections Used in Hydraulic Model      |
| Ground Elevations of Interest | Tr'ondëk Hwëch'in Settlement Land                    |
| HPW Drainage Culverts         | Approximate 50% AEP Open Water Flood Inundation      |
| Municipality                  | Inundation Under Modelled Open Water Runs            |
| Point of Interest             | Inundation Under Modelled Breakup Ice Jam Runs       |
| Highway Kilometer Post        | Composite Open Water and Ice Jam Inundation Extent   |
| Cross-Section Number          | Inundation Extent From Subsurface Seepage            |
| Highway                       | Potential Presence of Ice Debris During Jam Scenario |
| Local Road                    | Ice Jamming Extents                                  |
| Major Contour (5m)            |  |
| Minor Contour (1m)            |  |

Map Publication Date: 03/06/2026  
 0 50 100 150 200 250 m  
 (At original document size of 11x 17) 1:5,000

**Notes**  
 1. Coordinate System: NAD 1983 CSRS UTM Zone 7N Vertical Datum: CGVD2013, Geoid: CGG2013a  
 2. Data Sources: GeoYukon, Canada Lands Survey (CLS) CCM 982, CANVEC  
 3. Flood hazard extents shown on these maps are based on LIDAR collected in July, 2019 and topographical and bathymetric data that was collected in June and September 2024.  
 4. 50% AEP inundation lines are based on the 50% AEP flow estimate simulation in the hydraulic model which has been calibrated for higher AEP flood events and therefore should be considered approximate.  
 5. The content of these Composite Flood Hazard Maps is based on the methods, assumptions, limitations, and analysis documented in the Dawson City and Klondike Valley Flood Mapping Study produced for Yukon Government. Composite Hazard Maps are based on the available data which is current to the time the maps were produced. Such data contains inherent limitations given that the climatic conditions and geomorphic conditions are constantly evolving and cannot be predicted with certainty.
