Average Annual Peak Water Level Inundation Extent

0.5% AEP Flood Inundation Boundary Potential Additional Inundation Due to Wave Runup for the 0.5% AEP Flood

First Nation Settlement Lands - Surveyed

- NOTES:

 1. AEP corresponds to the Annual Exceedance Probability.

 2. Inundation extents are based on LiDAR based elevation model from June 2022, when the LiDAR data was captured. LiDAR data provided by Yukon Government and validated by Natural Resources Canada. Changes to the ground surface after June 2022, or temporary flood protection works that were removed prio to June 2022 are not represented in the inundation extents.

 3. Ground surface representation is provided at a 1m snatial.
- Ground surface representation is provided at a 1m spatial resolution. Features smaller than this resolution may not be well-represented.
- well-represented.

 I Imagery provided by the Yukon Government, captured in June 2022.

 Average annual peak water level inundation extent based on LiDAR based elevation model.

 This project is funded in part by the Government of Canada.

All units are metric and in metres unless otherwise specified. Transverse Mercator Projection, NAD83 Yukon Albers CSRS. Elevations are in metres above sea level (MSL). Canadian Geodetic Vertical Datum 2013 (CGVD2013)
