Average Annual Peak Water Level Inundation Extent
0.5% AEP Climate Change Flood Inundation Boundary
Potential Additional Inundation Due to Wave Runup for the 0.5% AEP Climate Change Flood
First Nation Settlement Lands - Surveyed

- NOTES:
 AEP corresponds to the Annual Exceedance Probability.
 Inundation extents are based on LiDAR based elevation model from June 2022, when the LiDAR data was captured. LiDAR data provided by Yukon Government and validated by Natural Resources Canada. Changes to the ground surface after June 2022, or temporary flood protection works that were removed prior to June 2022 are not represented in the inundation extents.
 Ground surface represented in the inviduation extents.
 Ground surface represented in the inviduation avents.

- resolution. Features smaller than this resolution may not be well-represented.
 4. Imagery provided by the Yukon Government, captured in June 2022.
 5. Average annual peak water level inundation extent based on LiDAR based elevation model.
 6. This project is funded in part by the Government of Canada.
 7. Flood extents shown on rivers/creeks are based on backwater flooding from the lake. Local flooding on rivers/creeks due to high inflows may result in higher flood levels.
